Special Issue

Computational Finance and Risk Analysis in Insurance

Message from the Guest Editor

Whilst developing valuation concepts for financial products, modelling of financial processes, risk measurement issues and portfolio optimization are often central aspects of research, the computational methods to produce the final numbers are equally important in the application of financial and insurance mathematics. With this Special Issue I would like to encourage all colleagues (from both academia and industry) working in the computational area of finance and insurance to share their innovative methods with the community. These methods can be (but are not limited to) the following:

- variants of classical computational approaches such as Monte Carlo algorithms, tree methods, quadrature or methods to solve partial differential equations,
- new machine learning methods, in particular neural network approaches,
- algorithms from computational statistics,
- specialized algorithms to deal with an important practical issue.

The Special Issue favours contributions that are closely related to a specific application in real life, but also theoretical contributions.

About the Journal

Message from the Editor-in-Chief

Risks is published in an open access format; research articles, reviews, and other content are released on the internet immediately after acceptance. Specifically, *Risks* welcomes submissions that (a) contribute with insight, outlook, understanding, and overview; (b) show creativity in terms of pedagogical methods and techniques; (c) help the transfer of theoretical and applied research into applications in the public and private domains; and (d) show responsibility for the impact on society. The scientific and the general public have unlimited free access to the content as soon as it is published.

Editor-in-Chief

Prof. Dr. Steven Haberman
Faculty of Actuarial Science and Insurance, Bayes Business School, City St George's, University of London, 106 Bunhill Row, London EC1Y 8TZ, UK

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility:

indexed within Scopus, ESCI (Web of Science), EconLit, EconBiz, RePEc, and other databases.

Journal Rank:

CiteScore - Q1 (Economics, Econometrics and Finance (miscellaneous))
