

Special Issue

Financial Risk Management in Energy Markets

Message from the Guest Editor

Energy markets are experiencing unprecedented times, riddled with geopolitical, geoeconomic, and climate change-related issues. Amidst growing investor awareness of environmental, social, and governance (ESG) principles and the insatiable energy demand for data centers powering generative artificial intelligence (AI), armed conflicts, election uncertainty, impending economic slowdown, and cryptocurrencies, it has become imperative to understand financial risk management, especially in the context of energy markets. This Special Issue aims to collect research contributions on topics including, but not limited to, the following:

- Armed conflicts and financial risk management in energy markets;
- Sustainable finance and green versus non-green energy risk management;
- Energy markets and election uncertainty;
- Gen AI, energy demand, and financial risk management in energy markets;
- Interactions between economic growth, green, and non-green energy risk management;
- Cryptocurrencies, energy demand, and financial risk management in energy markets.

About the Journal

Message from the Editor-in-Chief

Risks is published in an open access format; research articles, reviews, and other content are released on the internet immediately after acceptance. Specifically, *Risks* welcomes submissions that (a) contribute with insight, outlook, understanding, and overview; (b) show creativity in terms of pedagogical methods and techniques; (c) help the transfer of theoretical and applied research into applications in the public and private domains; and (d) show responsibility for the impact on society. The scientific and the general public have unlimited free access to the content as soon as it is published.

Editor-in-Chief

Prof. Dr. Steven Haberman
