Climate Change and Financial Risks

Message from the Guest Editors

Climate-related risks are systemic in nature, with the potential to significantly affect companies, investors, and consumers. The increasing volatility in weather patterns due to climate change introduces substantial risks to businesses and projects. Projections indicate that climate change will expose entities to a myriad of risks, including those related to climate itself, carbon pricing, and energy. Consequently, it is crucial to understand how management teams are addressing and disclosing these climate-related risks and opportunities, given their profound environmental, social, and regulatory implications for investors, financial intermediaries, and governments. We invite submissions that delve into the financial, legal, operational, and public policy ramifications of climate change risks, informed by the perspectives of a diverse range of stakeholders. This includes analyses and case studies that explore the following:

- Financial impacts
- Legal and regulatory implications
- Operational challenges
- Public policy considerations
- Stakeholder engagement and communication

About the Journal

Message from the Editor-in-Chief

Risks is published in an open access format; research articles, reviews, and other content are released on the internet immediately after acceptance. Specifically, *Risks* welcomes submissions that (a) contribute with insight, outlook, understanding, and overview; (b) show creativity in terms of pedagogical methods and techniques; (c) help the transfer of theoretical and applied research into applications in the public and private domains; and (d) show responsibility for the impact on society. The scientific and the general public have unlimited free access to the content as soon as it is published.

Editor-in-Chief
