Valuation Risk and Asset Pricing

Message from the Guest Editors

Modern asset pricing models have been applied in both theoretical and practical contexts for pricing standard asset classes, encompassing stocks, bonds, foreign exchanges, derivatives, structured products, and securitizations. Throughout this application, the assessment of valuation risks has remained a pivotal consideration. However, as markets evolve and new asset classes such as cryptocurrency emerge, alongside alternative asset classes like art and non-standard asset classes, including deposits, loans, and banking franchises, the task of developing pricing models and addressing valuation risks becomes notably more complex and fascinating for researchers and practitioners. We cordially invite you to submit your paper for publication in the *Risks* Special Issue, entitled “Valuation Risk and Asset Pricing”. We welcome any new empirical or theoretical papers which focus on the pricing of non-traditional asset classes, including, but not limited to, deposits, loans, securitizations, personal finance, cryptocurrency, alternative asset classes, and associated valuation risk management issues.

About the Journal

Message from the Editor-in-Chief

Risks is published in an open access format; research articles, reviews, and other content are released on the internet immediately after acceptance. Specifically, *Risks* welcomes submissions that (a) contribute with insight, outlook, understanding, and overview; (b) show creativity in terms of pedagogical methods and techniques; (c) help the transfer of theoretical and applied research into applications in the public and private domains; and (d) show responsibility for the impact on society. The scientific and the general public have unlimited free access to the content as soon as it is published.
