

Special Issue

Innovations in Annuities and Longevity Risk Management

Message from the Guest Editors

We invite researchers, practitioners, and policymakers to submit their original research for the Special Issue of *Risks* on longevity risk and innovations in annuities. The COVID-19 pandemic has underscored the importance of longevity risk management, as it has accelerated demographic changes and highlighted potential vulnerabilities in retirement planning. This Special Issue will explore dimensions of longevity risk, including its impact on individuals, corporations, government, pension systems, and financial markets. We are particularly interested in contributions investigating innovations in retirement products and markets, risk management strategies and financial instruments necessary to implement the strategies, and relevant policy implications. Topics may include but are not limited to the following: the development of flexible and adaptive annuity products, the analysis of alternative retirement products such as modernized tontines or decentralized annuities, the integration of longevity risk into retirement financial planning, and the role of modern technology and data analytics in shaping products and markets. We look forward to receiving insightful contributions.

About the Journal

Message from the Editor-in-Chief

Risks is published in an open access format; research articles, reviews, and other content are released on the internet immediately after acceptance. Specifically, *Risks* welcomes submissions that (a) contribute with insight, outlook, understanding, and overview; (b) show creativity in terms of pedagogical methods and techniques; (c) help the transfer of theoretical and applied research into applications in the public and private domains; and (d) show responsibility for the impact on society. The scientific and the general public have unlimited free access to the content as soon as it is published.
