

Special Issue

Risk Analysis and Management in the Digital and Innovation Economy

Message from the Guest Editor

The emergence of new technologies leads to structural changes in socioeconomic systems. These changes occur at regional, industrial, and business levels. At the regional level, these changes should be implemented by public authorities as part of the smart and sustainable development of territories. At the industrial level, these changes result in the development of Industry 4.0 in the form of new products, supply chains, business models, and technologies. Finally, at the business level, the emergence of these technologies leads to the transformation of business processes and the reshaping of their operations. All these changes lead to the emergence of new risks and requires the development of new methods for their assessment. This Special Issue is open to all types of papers dedicated to risk analysis and management in the digital and innovation economy, but empirical works reflecting qualitative and quantitative or mixed decisions are especially welcome.

About the Journal

Message from the Editor-in-Chief

Risks is published in an open access format; research articles, reviews, and other content are released on the internet immediately after acceptance. Specifically, *Risks* welcomes submissions that (a) contribute with insight, outlook, understanding, and overview; (b) show creativity in terms of pedagogical methods and techniques; (c) help the transfer of theoretical and applied research into applications in the public and private domains; and (d) show responsibility for the impact on society. The scientific and the general public have unlimited free access to the content as soon as it is published.

Editor-in-Chief
