

## Special Issue

# Long Term Forecasting of Stock Returns and Long Term Saving

### Message from the Guest Editor

The long-term forecasting of stock returns is a hot topic. It concerns the prediction of returns at least one year into the future. The long-horizon forecasting of returns and risks is important for the long-term planning of savings and pensions. While more long-term digital financial planning methods are being used, it is becoming increasingly important that the long-term forecasting of stock returns is well researched and of good quality. We encourage the submission of research utilizing both parametric and nonparametric models as well as both classical statistical techniques and machine learning techniques. It is becoming easier to produce predictive models, and it is therefore important to select the best one. Therefore, all contributions should clearly validate the model selected.

### Guest Editor

Prof. Dr. Jens Perch Nielsen

Bayes Business School, City St George's, University of London, London, UK

### Deadline for manuscript submissions

31 October 2025

## About the Journal

### Message from the Editor-in-Chief

*Risks* is published in an open access format; research articles, reviews, and other content are released on the internet immediately after acceptance. Specifically, *Risks* welcomes submissions that (a) contribute with insight, outlook, understanding, and overview; (b) show creativity in terms of pedagogical methods and techniques; (c) help the transfer of theoretical and applied research into applications in the public and private domains; and (d) show responsibility for the impact on society. The scientific and the general public have unlimited free access to the content as soon as it is published.
