

## Special Issue

# Emerging Risks in Banking and Financial Systems

### Message from the Guest Editor

Global banking and financial systems are under increasing pressure due to a range of emerging risks that challenge both traditional financial models and contemporary regulatory frameworks. As the world becomes more interconnected, financial institutions are increasingly exposed to evolving risks, such as geopolitical tension, fintech, artificial intelligence, machine learning, climate risk, etc. These emerging threats create new vulnerabilities for financial systems worldwide.

This Special Issue seeks to explore the nature of these emerging risks in banking and financial systems. We welcome submissions on (but not limited to) the following topics.

- Geopolitical Conflicts and Financial Stability
- FinTech and the Transformation of Banking
- Artificial Intelligence and Machine Learning in Finance
- Climate Risk and Sustainable Finance
- Regulatory and Policy Responses to Emerging Risks

We invite both theoretical and empirical papers, as well as case studies and policy analyses, that address the above themes. Submissions should provide a rigorous examination of emerging risks and offer insights that can inform policy, practice and future research.

## About the Journal

### Message from the Editor-in-Chief

*Risks* is published in an open access format; research articles, reviews, and other content are released on the internet immediately after acceptance. Specifically, *Risks* welcomes submissions that (a) contribute with insight, outlook, understanding, and overview; (b) show creativity in terms of pedagogical methods and techniques; (c) help the transfer of theoretical and applied research into applications in the public and private domains; and (d) show responsibility for the impact on society. The scientific and the general public have unlimited free access to the content as soon as it is published.
