

Special Issue

An Ageing Population, Retirement Planning, and Financial Insecurity

Message from the Guest Editor

As life expectancy continues to increase and more workers are covered by defined contribution plans, there has been growing concern regarding the retirement adequacy of future retirees. Additionally, the pandemic has led to an increase in early, and in some cases, forced retirements, which could lead to financial insecurity for some individuals. For this Special Issue, we invite high-quality empirical, theoretical, and policy-focused research related to but not limited to the following topics:

- Retirement planning
- Pension plans
- Defined contribution plans
- Ageing population; longevity risks
- Retirement adequacy
- Regulation of retirement plans
- Financial literacy
- Financial knowledge
- Financial planning resources
- Pandemic-related retirement concerns

About the Journal

Message from the Editor-in-Chief

Risks is published in an open access format; research articles, reviews, and other content are released on the internet immediately after acceptance. Specifically, *Risks* welcomes submissions that (a) contribute with insight, outlook, understanding, and overview; (b) show creativity in terms of pedagogical methods and techniques; (c) help the transfer of theoretical and applied research into applications in the public and private domains; and (d) show responsibility for the impact on society. The scientific and the general public have unlimited free access to the content as soon as it is published.

Editor-in-Chief

Prof. Dr. Steven Haberman
