Message from the Guest Editors

Dear colleagues,

Reproduction is the one of the crucial components that hampers productivity and can be influenced by several factors, i.e., genetic, environmental, nutritional, metabolic, hormonal, immunological, that could lead to reproductive failures. In recent decades, techniques have been developed to improve the management and control of reproduction in ruminants, but research is still needed to increase our understanding of the physiological events that occur in reproduction, which could help in improving farm reproductive management.

The aim of this Special Issue is to bring together original research papers and reviews on basic and applied aspects of ruminant reproduction, both in males and females, possibly using new and multidisciplinary approaches.

Message from the Editor-in-Chief

Ruminants (ISSN 2673-933X) is an international open access journal. It publishes original research articles, reviews, and communications that offer substantial new insight into any field of study that involves ruminants, including cattle, all domesticated and wild bovines, goats, sheep, giraffes, deer, gazelles, and antelopes.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus**, **EBSCO**, and **other databases**.

Rapid Publication: manuscripts are peer-reviewed and a first decision is provided to authors approximately 20.9 days after submission; acceptance to publication is undertaken in 4.3 days (median values for papers published in this journal in the second half of 2023).
