

## Special Issue

# Adaptive Human–Machine Interaction

### Message from the Guest Editors

Today, a wide range of advanced driver assistance systems (ADAS) are being developed to enhance drivers' perception of hazards and/or partly automate the driving task. Most ADAS consists of sensorized systems aimed at enhancing vehicle awareness, improving occupants' experience, and increasing driving safety. An effective communication between ADAS and drivers, mainly deployed through vehicular human–machine interfaces (HMI), is a challenging design task for practitioners and scholars in the automotive field. This Special Issue covers the following topics: technological challenges in human factors for designing adaptable, usable, and accessible human–machine interfaces, affective computing and emotional regulation, artificial intelligence for safe mobility and implementation in HMIs, and user experience in driving. New theories, design methodologies, and enabling technological solutions for innovative, integrated, and adaptive HMIs are in this Special Issue's scope. [...]

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Raphael Grzebieta

Transport and Road Safety (TARS), University of New South Wales, Old  
Main Building (K15), Sydney, NSW 2052, Australia

---

#### Author Benefits

##### High Visibility:

indexed within Scopus, ESCI (Web of Science), SafetyLit,  
and other databases.

##### Journal Rank:

CiteScore - Q2 (Safety Research)

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 34 days after  
submission; acceptance to publication is undertaken in 5.6  
days (median values for papers published in this journal in  
the second half of 2025).
