Special Issue

Safety and Complexity

Message from the Guest Editor

Safety is a major concern in key industrial sectors as accidents have the potential for catastrophic consequences. Safety-critical and high-reliability organisations are characterized as complex systems with a great potential for stress, accidents, and injuries. This Special Issue will explore the challenges of safety with a focus on the application of complexity theory. Papers addressing the interface on how complexity theory can inform factors in the technological, organisational and human dimensions of safety are especially welcomed.
