

Special Issue

The Role of Behavior-Based Safety (BBS) in Preventing Injuries in the Workplace and Beyond

Message from the Guest Editors

As an evidence-based approach to improving a leading contributor to workplace injuries—employees' behavior—BBS quickly became popular, promoted with large-scale marketing by several consulting firms. However, the BBS approach led to significant controversy. The purpose of this Special Issue "The Role of Behavior-Based Safety (BBS) in Preventing Injuries in the Workplace and Beyond" is to publish case studies, commentaries, and research projects that reveal the variability in BBS applications and results, thereby enabling a determination of best BBS practices. We invite you to share your real-world experiences with BBS—successful, unsuccessful, or incomplete—that can help to determine what organizations can expect to achieve with particular applications of behavioral-science principles, as well as define barriers that organizations need to overcome in order to optimize the success of a BBS process.

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), SafetyLit,
and other databases.

Journal Rank:

CiteScore - Q2 (Safety Research)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 34 days after
submission; acceptance to publication is undertaken in 5.6
days (median values for papers published in this journal in
the second half of 2025).
