

Special Issue

Nanomaterials: Structures, Properties, Technological Uses and Environmental Impacts

Message from the Guest Editor

Crystal structures control the properties and behaviors of nanomaterials under different pressure and temperature conditions. Nanomaterials have superior characteristics compared to their bulk counterparts. Synthetic and natural nanomaterials have gained prominence in today's world because of their useful chemical and physical properties, and these materials also have toxicity and environmental impacts. This Special Issue aims to publish papers related to state-of-the-art experimental characterization of synthetic and natural nanomaterials, including but not limited to the following topics:

- Structural and chemical characterization of nanomaterials (1–1000 nm size range);
- Results of cutting-edge experimental techniques to nanomaterials (scattering and diffraction techniques, HRTEM, etc.);
- Properties and technological uses;
- Environmental impacts.

Guest Editor

Prof. Dr. Sytle M. Antao

Department of Geoscience, University of Calgary, Calgary, AB T2N 1N4, Canada

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Claus Jacob
Division of Bioorganic Chemistry, School of Pharmacy, Saarland
University, D-66123 Saarbruecken, Germany

Author Benefits

High Visibility:

indexed within ESCI (Web of Science), Scopus, and other
databases.

Journal Rank:

CiteScore - Q1 (Multidisciplinary)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 26.7 days after
submission; acceptance to publication is undertaken in 5.6
days (median values for papers published in this journal in
the second half of 2025).
