Special Issue

Research Progress of Diabetes Mellitus

Message from the Guest Editor

Diabetes is a global health crisis that has rapidly increased in past decades, leading to an increase in mortality, morbidity and healthcare. The health-related increase has arisen due to diabetic complications which are frequent in diabetic patients and over time damage the heart, blood vessels, eyes, kidneys and nerves, and increase the risk of heart disease and stroke, where many have more than one of these complications (Global report on Diabetes WHO, 2016). This damage is primarily due to a complex metabolic disease characterised by extended high levels of blood glucose (WHO Guidelines Approved by the Guidelines Review Committee, 2011). The Special Issue invites original research papers to address research progress in diabetes mellitus, covering, but not limited to, genetics and genetic risk factors, insulin action, beta cell function, insulin-producing beta cells and/or transplantation, nutrition and environmental links to diabetes.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Claus Jacob
Division of Bioorganic Chemistry, School of Pharmacy, Saarland
University, D-66123 Saarbruecken, Germany

Author Benefits

High Visibility:
indexed within ESCI (Web of Science), Scopus, and other
databases.

Journal Rank:
CiteScore - Q1 (Multidisciplinary)

Rapid Publication:
manuscripts are peer-reviewed and a first decision is
provided to authors approximately 26.7 days after
submission; acceptance to publication is undertaken in 5.6
days (median values for papers published in this journal in
the second half of 2025).
