Structural Genomic Evaluations Using Molecular Modeling

Message from the Guest Editor

The field of structural genomics has been expanding rapidly for several years. The need for high quality analyses of protein structures is valuable to drug design efforts and chemotherapeutic applications.

Computational analysis provides a general prediction of biochemical function establishing a foundation for further direct experimentation. Specifically, techniques such as domain identification, homology modeling, *in silico* drug screening, and pharmacophore identification allow us to develop a greater understanding of the potential roles of these proteins in signal transduction and gene expression. Putative characterizations of hypothetical proteins open doors to novel insights expanding our knowledge of the pathophysiology of both acute and chronic diseases.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Claus Jacob
Division of Bioorganic Chemistry, School of Pharmacy, Saarland
University, D-66123 Saarbruecken, Germany

Author Benefits

High Visibility:

indexed within ESCI (Web of Science), Scopus, and other
databases.

Journal Rank:

CiteScore - Q1 (Multidisciplinary)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 36.6 days after
submission; acceptance to publication is undertaken in 6.8
days (median values for papers published in this journal in
the first half of 2025).
