Non Destructive Testing and Evaluation of Aerospace Composite Structures

Message from the Guest Editors

This Special Issue focuses on fostering improvements and new developments of technology in areas related to novel NDT&E techniques and approaches for characterization and real-time monitoring of aerospace composites, including use of advanced smart sensors and sensor networks, as well as strategies for data utilization for overall system safety and health management. We would like to invite original research articles, as well as review articles, that contain theoretical, analytical, and experimental investigations covering all aspects of NDT&E in aerospace composites and composite structures.

Deadline for manuscript submissions:
closed (25 May 2018)
Message from the Editorial Board

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Ei Compendex, Inspec (IET) and Scopus.

CiteScore 2017 (Scopus): 3.23; ranked 9/116 in 'Physics and Astronomy: Instrumentation' and 100/644 in 'Electrical and Electronic Engineering.'
