### **Message from the Collection Editors**

Dear Colleagues,

Convolutional Neural Networks are a class of deep neural networks that leverage spatial information, and are, therefore, well-suited to be applied to different tasks in image-processing and computer vision.

Exploiting deep and end-to-end learnable architectures, CNNs allow to learn the best features or abstract representations to solve the particular problem at hand. This flexibility to adapt to different problems is among the reasons they now represent the state-of-the-art in many challenging image-processing and computer vision applications.

Nonetheless, deep learning presents its own set of specific challenges: the need for large-cardinality training sets can make data labeling cumbersome and expensive, and the high computational complexity of neural models can be an obstacle to mobile embedding and user personalization.

This Special Issue covers all the topics related to the application of CNNs to image processing and computer vision tasks, as well as topics related to the definition of new CNN architectures, highlighting their advantages in addressing the problems currently faced by the imaging community.

#### **Prof. Dr. Vittorio M. N. Passaro** Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

## **Author Benefits**

**Open Access :** free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases. **Journal Rank:** JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
