### Message from the Guest Editors

Dear Colleagues,

Industrial systems worldwide are undergoing a paradigm shift towards Industry 4.0. Self-decision making is the core characteristic of such systems, where machine intelligence is employed to accomplish tasks. Cyber physical systems is one such area of enabling technology necessary to create a seamless integration of cyber and physical components. The digital twinning of physical systems is rapidly developing, and can correlate large real-time sensing and IoT data. Sensor fusion, machine learning, AI, and other advanced techniques are applied to create a dynamic virtual representation of entire systems.
