Optical Sensors Based on Micro/Nanostructured Materials

Guest Editor:

Dr. Georgios Tsigaridas

Department of Physics, School of Applied Mathematical and Physical Sciences, National Technical University of Athens, Zografou Campus, GR-15780 Zografou, Athens, Greece

Deadline for manuscript submissions:

closed (1 December 2022)

Message from the Guest Editor

This Special Issue covers all topics related to the design, development, testing, and application of optical sensors based on microstructured and nanostructured materials, such as photonic crystals, photonic crystal fibers, plasmonic materials, etc. We are interested in all sorts of sensing applications, such as refractive index sensors, chemical sensors, environmental sensors (temperature, pressure, humidity), strain sensors, magnetic field sensors, etc. We are especially interested in biological sensors and their applications.

Both theoretical and experimental works will be considered, provided that they offer a significant contribution in this field. We are especially interested in research showcasing innovation, e.g., proposing a novel device/sensing principle for a specific application or field of applications. However, authors can also submit their work on substantial improvements/extensions of existing devices and/or methods, including novel applications for existing sensors.

Furthermore, review articles will also be considered, provided that they offer a comprehensive summary of the important developments in a specific field within the scope of this Special Issue.

Orabona n. 4, 70125 Bari, Italy

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access : free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Ei Compendex](#), [Inspec](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
