### Message from the Guest Editors

This Special Issue aims to highlight advances in the detection and mapping of plant stress using the latest remote sensing techniques. Topics may include, but are not limited, to the following aspects:

- The detection, mapping, or monitoring of one or several abiotic or biotic stresses
- Remote sensing from drone, aircraft, or satellite
- The use of solar-reflective or thermal infrared, multi-/hyperspectral, or sun-induced fluorescence sensors, or the synergistic use of multiple sensors
- The use of novel semi-empirical (e.g., vegetation indices), physically-based, or statistical approaches
