### **Message from the Guest Editor**

Dear Colleagues,

[The Sustainable Development Goals Report 2018](#) highlights several enduring issues as the strong probability of future water scarcity and flooding, and the implementation of integrated water management, in particular for transboundary basins. Significant advances have been made in the area of radar altimetry data processing and use in forcing or assimilation of/in hydrological and hydrodynamic models. The key challenge today remains how to mix different data sources, at various temporal and spatial scales, in order to address the main issues with water resources management. Advances expected from the synergetic use of various sensors for water cycle components observation, measurement, and modeling will be especially important for the least developed countries that are particularly exposed to the effects of global change. Research works within this general scope will be welcomed for the Special Issue.

Dr. Frédérique Seyler

Orabona n. 4, 70125 Bari, Italy

## Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

## Author Benefits

**Open Access** :— free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility**: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [PubMed](#), [MEDLINE](#), [PMC](#), [Embase](#), [Ei Compendex](#), [Inspec](#), and many other databases.

**Journal Rank**: [JCR - Q1](#) (*Instruments & Instrumentation*) / [CiteScore](#) - Q1 (*Instrumentation*)
