Data Analytics and Applications of the Wearable Sensors in Healthcare

Message from the Guest Editors

Wearable technologies have become widely used in the health sector with applications ranging from clinical research to fitness applications. In multiple research studies wearable technologies are combined with mobile devices to collect patient reported outcomes. Furthermore, health coaching applications are widely interfacing with fitness wearable devices or smart watches. The availability of those wearable technologies are paving the wide to many disruptive data-driven applications across the whole healthcare domain. This special issue will cover a wide range of topics related to health wearable data analytics and applications such as:

- Data analytics of the wearable sensors
- Clinical applications of the wearable sensors
- Visualization of wearables health data.
- Linking digital assessment of mobility to clinical endpoints
- Intrinsic variability of the actigraphy signals
- Common Representation of sensors data
- Health Recommender Systems based on Wearable Health Data.
- Sleep analysis through wearable devices
- Health Recommender Systems based on Wearable Health Data.
- Human factors, human computer interaction and usability of health wearable applications.

Deadline for manuscript submissions:
31 October 2018
Editor-in-Chiefs

Message from the Editorial Board

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Ei Compendex, Inspec (IET) and other databases.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 21 days after submission; acceptance to publication is undertaken in 5 days (median values for papers published in the first six months of 2018).
