**Message from the Guest Editors**

Dear Colleagues,

In the past decade, biomarker research has experienced phenomenal growth powered by novel molecular readout (nano) technology in genomics, proteomics and metabolomics. The biological markers of disease are now enabling many new and innovative applications in the field of medicine, molecular biology and biotechnology. This special issue will focus on convergence of biomarkers and nanotechnology based molecular readout systems and clinical applications.

Prof. Dr. Matt Trau
Dr. Muhammad J. A. Shiddiky

Deadline for manuscript submissions: **closed (29 February 2012)**
Message from the Editorial Board

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Ei Compendex, Inspec (IET) and Scopus.

CiteScore (2018 Scopus data): 3.72; ranked 9/123 in 'Physics and Astronomy: Instrumentation' and 102/661 in 'Electrical and Electronic Engineering'.
