closed (31 July 2008)

Message from the Guest Editor

Probing in micro world using electrochemical microsensors, progress and challenge will be covered in this special issue. Electrochemical microsensors have been studied for the last 3 decades as highly sensitive and selective yet relatively inexpensive device to probe micro world for applications ranging from chemical and biological sensing to clinical and medical care. This wide range of applications is due to electrochemical microsensors high sensitivity, selectivity, fast response time and low manufacture cost. In this special issue different electrochemical sensors and their applications will be described.
Message from the Editorial Board

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High visibility:** indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), *Ei Compendex, Inspec (IET)* and *Scopus.*

**CiteScore 2017** (Scopus): 3.23; ranked 9/116 in 'Physics and Astronomy: Instrumentation' and 100/644 in 'Electrical and Electronic Engineering.'
