Message from the Guest Editors

This Special Issue will be devoted to new concepts in immunosensor design, as electrochemical, optical, or mass-sensitive biosensing devices. Here, the focus is on emerging trends in antibody-based systems or devices including wearable immunosensors, self-powered immunosensors, photoelectrochemical and smartphone-coupled immunosensing systems. Special attention will be given to microfluidic platforms and paper-based sensing surfaces, metal nanoparticle- and quantum dot-labelled immunosensors. All types of immunosensing applications are welcome.

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.
