Infrared Sensors and Technologies

Message from the Guest Editor

Dear Colleagues,

Infrared sensing technologies have been commonly utilized in a variety of applications in industrial and medical fields. Recently, the development of new technologies, such as low-cost InGaAs near-infrared cameras, microbolometer thermal imaging arrays, and hyperspectral cameras have been rapidly expanding these fields. Novel light sources, represented by high-powered near-infrared LEDs and quantum cascade lasers emitting mid-infrared light, also make it possible to develop compact and inexpensive systems for infrared sensing applications. This Special Issue encompasses a broad range of infrared sensors and their applications, including state-of-the-art technologies in sensing devices and systems.

Prof. Dr. Yuji Matsuura

Guest Editor
Message from the Editorial Board

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Ei Compendex, Inspec (IET) and Scopus.

CiteScore 2017 (Scopus): 3.23; ranked 9/116 in 'Physics and Astronomy: Instrumentation' and 100/644 in 'Electrical and Electronic Engineering.'
