Development of Nanomaterials and Their Applications in Sensor Detection

Guest Editor:

Prof. Dr. Vladimir Pavelyev

 Department of Nanoengineering, Samara University, 443086 Samara, Russia
IPSI RAS - Branch of the FSRC "Crystallography and Photonics" RAS, 443001 Samara, Russia

Deadline for manuscript submissions: closed (31 December 2021)

Message from the Guest Editor

This Special Issue is devoted to reports on research based on the utilization of nanomaterials in sensor applications. Nanomaterials derive their extraordinary properties from guantum confinement and lattice modifications. A field of sensors relies on various materials and devices to capture physical, chemical or biological stimuli and produce output signals. Development of sensor materials for high selectivity, high stability, and other aspects is highly desirable. High chemical reactivity improved electronic optical properties of nanomaterials; physical and properties of nanomaterials can be suitably tuned to get maximum selectivity in sensor applications. These nanomaterials may be used in sensing devices as the active element to capture the stimulus, as well as the transducers to convert the change due to stimuli into observable output signals, or as the circuit components for sensing applications. The performance of sensing materials depends on their microstructural properties, such as morphology, crystalline phase, etc. Therefore, research on different approaches of synthesis of nanomaterials and their utilization in sensing applications is of great importance.

Message from the Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access : free for readers, with article processing charges (APC) paid by authors or their institutions. **High Visibility:** indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases. **Journal Rank:** JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
