Passive Electromagnetic Sensors for Autonomous Wireless Networks

Message from the Guest Editors

Dear Colleagues,

The contents of this Special Issue deal with progress in the design, modeling and performance evaluation of novel electromagnetic sensors. Fully passive and wireless electromagnetic sensors are actually very good candidates for measuring physical or chemical quantities in harsh environments and/or for applications requiring sensing devices with low-cost of fabrication, small size and long-term measurement stability. Passive electromagnetic sensing devices convert typically the variation of the quantity of interest (such as, e.g., pressure, temperature or gas concentration) into the measurable variation of an electromagnetic wave descriptor. We invite authors to contribute original research articles, as well as review articles, which stimulate the continuing efforts in innovative solutions for electromagnetic sensors. […]

Message from the Editorial Board

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Ei Compendex, Inspec (IET) and Scopus.

CiteScore (2018 Scopus data): 3.72; ranked 9/123 in 'Physics and Astronomy: Instrumentation' and 102/661 in 'Electrical and Electronic Engineering'.
