Message from the Guest Editor

Dear Colleagues,

The special issue on photodetectors intends to cover state of the art in detection of light, broadened to include electromagnetic radiation such as x-ray and THz radiation, as well as particle detection. Papers are solicited which deal with all aspects of absorption of light in different media and structures, generation of carriers or other forms of interaction of light with the medium, such as plasmon resonance, and transport, collection, and generation of electric signal resulting from this optical excitation. Of special interest is structures with sub-wavelength dimensions such as quantum dots and wires, two-dimensional systems such as graphene or 2D electron or hole gasses, and arrays of such systems such as photonic bandgap materials. Regular research articles as well as review articles are welcome.

Prof. Dr. Bahram Nabet

Message from the Editorial Board

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed), Ei Compendex, Inspec (IET) and Scopus.

CiteScore (2018 Scopus data): 3.72; ranked 9/123 in 'Physics and Astronomy: Instrumentation' and 102/661 in 'Electrical and Electronic Engineering'.
