### Image Processing and Computer Vision Sensing Technologies in Engineering Applications and Digital Twins

### Message from the Guest Editors

This Special Issue aims to explore recent advances in Optronics Sensing Technologies focusing though in relevant to Digital Twins domains such as 3D reconstruction models and multi-object detection and localization. Specifically, novel contributions that will explore their validity and applicability for a Digital Twin for visual data, independently of the application (e.g., maintenance, construction, surveillance) as well as review articles that can facilitate the community towards a more effective research building are requested to contribute to the objectives of this Special Issue.
