Sensing Functional Imaging Biomarkers and Artificial Intelligence

Message from the Guest Editor

In the new era of target therapy, approaches to imaging are shifting from qualitative to quantitative. The sensing of functional imaging biomarkers could narrow quantitative data, reflecting microenvironmental diseases' heterogeneity, and usually serve to refine or enhance the diagnostic information obtained by conventional image analysis, assess early therapeutic responses, predict individual outcomes, and guide treatment based on patient- and disease-specific features. Following the appearance of artificial intelligence and its fantastic performance, research using machine learning and AI has been conducted in medical image analysis. At present, medical image analysis is one of the leading fields of AI application. Machine learning and deep learning are now being used not only for lesion detection, differential diagnosis, and region extraction but also for image alignment and reconstruction. The dramatic improvement in AI performance has led to the adoption of AI in clinical sites, especially in the fields of nuclear medicine and radiology. For more details, please visit [here](#).

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
