Design of Orthogonal Waveform and Synthetic Aperture Radar Imaging Application of Miniature mmW LFM CW MIMO Radar

Message from the Guest Editors

Recent advances in frequency-modulated continuous-wave (FCW) radar based on complementary metal oxide semiconductors make it possible to design low-cost and low-power millimeter-wave (mmW) sensors. The application of the miniaturized, lightweight, and inexpensive mmW radar sensor is gradually expanding, mainly including target detection and tracking, object recognition and classification, the performance of vital signs, the combination of mmW radar and communication, the small synthetic aperture radar (SAR), and the holographic 3-D imaging. Due to the similarity of wireless communication and radar systems, MIMO radar uses multiple antennas to transmit orthogonal waveforms and multiple antennas to receive at the same time. After flexible signal processing, the performance of radar imaging, target detection, and parameter estimation can be significantly improved. The main topics of this review and original research papers focus on the implementation basis and various applications of mmW MIMO radar, including but not limited to orthogonal waveform design, target detection and recognition, high-resolution SAR imaging, and moving target indication.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
