

## Special Issue

# IoT Sensors Development and Application for Environment & Safety

### Message from the Guest Editors

Recently, the growing interest in the potential use of smart sensors has stimulated research in this field. Many governments offer funding for research into the development of innovative devices for controlling airborne pollutants, but also for controlling classical parameters such as temperature and humidity. These controls are all the more important in the workplace where people's health must be preserved. Wearable devices play a key role. The results of these controls can be shared in even complex sensor systems, creating pervasive sensor networks in order to reduce power and area consumption. This Special Issue, therefore, aims to put together original research and review articles on recent advances, technologies, solutions, applications, and new challenges in the field of sensing for environment and safety.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
