

## Special Issue

# Advances in Intelligent Autonomous Vehicle L4&5 Technologies: Localization and Mapping in Challenging Road Structures and Adverse Weather Conditions

### Message from the Guest Editor

Mapping and localization are important pillars to enable safe autonomous driving. In levels four and five, the precise mapping of critical environments, such as high buildings, dense trees, long tunnels, multilayer junctions, underpasses, and bridges, is very challenging and necessary to deploy autonomous vehicles in modern cities regardless the complexity of road structures. In addition, implementing online mapping modules is very important to reduce the cost of building and updating maps using many autonomous agents. Consequently, the accurate localization inside the precisely generated maps in adverse weather factors and critical environmental conditions, such as snow, wet, old, grass, foggy, and shoveled surfaces, is a dominant demand to elevate the safety and quality of autonomous driving to L4&5 and commercialize autonomous vehicles globally.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
