Sensor Technology in Ophthalmology

Message from the Guest Editors

Remarkable progress has been made in ophthalmology in recent years. The interdisciplinary scientific co-operation between ophthalmologists, physicists, and engineers plays an outstanding role in this. The development of new technologies allows much more precise diagnostic images to be taken using imaging techniques that provide excellent predictability. This opens up unimagined possibilities not only in diagnostics but also in surgical applications. The aim of our Special Issue is to illustrate the latest developments and their application in biomedical imaging techniques and sensing technology in ophthalmology. As a fundamental step in diagnostics and surgery, we invite authors to submit articles on corresponding clinical advances and innovations. Prof. Prof.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.
