

## Special Issue

# Smart Internet of Things System for Renewable Energy Resources

### Message from the Guest Editors

IoT helps smart grids to support various network functions, including the generation, distribution, and consumption of energy, by incorporating IoT devices (such as sensors, actuators, and smart meters) with their related connectivity, automation, and tracking abilities.

For these applications, the use of low-power long-range wireless networks (LPWANs) is fundamental to facilitate all necessary tasks in the smart grids of City 4.0 and Industry 4.0. The integration of renewable energies (photovoltaic solar, wind energy, biomass energy, hydroelectric energy, and other sources) in smart grids implies the monitoring of households, cities, industries, and electric vehicles at all times. The development of monitoring and control applications using mobile devices is fundamental in these systems, which complement all the possibilities offered by the IoT. Smart energy meters allow for communication between consumers and utility command centers to exchange messages about electrical consumption. Thus, it is essential to have access to them from any location, including instant access to information using mobile devices or computers.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro  
Department of Electrical and Information Engineering, Politecnico di Bari, Via Orabona 4, 70126 Bari, Italy

---

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
