

## Special Issue

# Artificial Intelligence and Sensor-Based Gait Recognition

### Message from the Guest Editor

This Special Issue aims to provide a comprehensive platform for researchers to present their latest findings and innovations in the field of artificial intelligence and sensor usage for gait recognition. We invite original research papers that address a spectrum of challenges, including sensor design, data collection, feature extraction, and the development of novel AI algorithms capable of analyzing and interpreting complex gait data. The sensors include both wearable and non-wearable sensors. Feature extraction, pertaining to the nonlinear analysis of gait dynamics and the association of machine learning algorithms for gait recognition, can be performed. Submissions are encouraged to demonstrate significant advances in the accuracy, efficiency, and robustness of gait recognition systems. Papers that present new datasets, innovative applications, or insightful reviews of current challenges and future directions in this domain are also welcome.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
