### Estimation, Control and Self-Sensing Approaches for Microelectromechanical (MEMS) Systems

### Message from the Guest Editors

Microelectromechanical systems (MEMS) have been a catalyst for innovation, giving rise to new types of applications in smart homes, wearables, and the Internet of Things (IoT) which were not possible with traditional technologies. MEMS technology enables for device miniaturization and utilizes unconventional physics at the nanoscale for sensing and actuation. Compared to macroscopic systems, the internal state estimation and control of miniaturized systems can be challenging due to their small size. In resource-limited MEMS devices, integrated sensing capabilities are important to allow for the autonomous monitoring of system states without separate sensors or external inputs, which enables for physically intelligent responses to changes. Various integrated sensing mechanisms are available in MEMS smart devices. making use of piezoresistive, piezoelectric, capacitive, thermal, and optical effects. Original research work and review articles covering topics including the modeling, fabrication, integration, actuation, sensing, signal processing, state estimation and control of MEMS devices are all welcome.

### **Guest Editors**

#### Dr. Michael Ruppert

School of Mechanical and Mechatronic Engineering, University of Technology Sydney, Sydney, Australia

#### Dr. Fangzhou Xia

Mechanical Engineering Department, Massachusetts Institute of Technology, Cambridge, Cambridge, MA, USA

#### Deadline for manuscript submissions

closed (31 August 2024)

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological

developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

### Editor-in-Chief

#### Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

### **Author Benefits**

### **Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

### **High Visibility:**

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
