Special Issue

Wearable and BAN Sensors for Physical Rehabilitation and eHealth Architectures (Volume II)

Message from the Guest Editors

This Special Issue will focus on the current state-of-theart of BANs and wearable sensing devices for physical rehabilitation of impaired or debilitated citizens. It will cover novel technological achievements related to different sensing technologies (optical or electronic), their design, and implementation. Both original research papers and review articles describing the current stateof-the-art are welcome. We hope this SI will provide you with an overview of the present status and future outlook of the aforementioned topics.

- optical fiber sensors
- biomedical sensors
- wearable sensors
- e-Health
- body-area-network sensors
- smart health

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief
