

## Special Issue

# Nanosensors: 2026 Perspectives

### Message from the Guest Editors

This Special Issue titled "Nanosensors: 2026 Perspectives" is a collection of short articles (e.g., 2–4 pages in length) in which our journal's EBM and selected researchers provide their succinct insights into state-of-the-art developments, existing challenges, and future directions within their respective fields of expertise with regard to sensors. Regarding the format of these short papers, authors may adapt the journal's template to their specific requirements, though a formal abstract remains mandatory. To maintain a focus on current advancements, references should predominantly feature works published within the last three to five years. Consequently, these Perspectives 2026 papers are distinct from the traditional research articles or review papers typically submitted to *Sensors*. We welcome experts and colleagues to share their valuable perspectives on the emerging trends in nanosensors and sensing technologies as part of this Special Issue. For more details, please visit [here](#).

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
