

Special Issue

Advances in Principles, Methods and Applications of Brain-Computer Interaction

Message from the Guest Editors

Brain-computer interfaces (BCIs) represent a continuously growing research field that originated in an attempt to enable subjects with severe neuromuscular disorders to communicate and interact with the world around them. Advances in the capabilities of sensors, computation devices, and wireless technologies, as well as in signal processing, machine learning and neuroscience methods have expanded the BCI concept, and it is now subject to investigation in a wide range of fields such as remote healthcare, industry, marketing, education, and gaming. Recently, the use of BCI technology in other aspects of daily life, including mental load management, decision making, neuro-marketing, and gaming, has been explored. As the aspiration is that BCI technology will gradually move towards use in practical applications, the need for more reliable and robust solutions for detecting user intent is, in the current landscape, as urgent and important as it ever has been. This Special Issue aims to collect papers on a broad spectrum of specific topics reflecting recent advances in the methodology, design and applicability of BCI. For more details, please visit [here](#).

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro
Department of Electrical and Information Engineering, Politecnico di Bari, Via Orabona 4, 70126 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
