# Advanced Interference Mitigation Techniques for GNSS-Based Navigation

### Message from the Guest Editors

Invited original research contributions can cover a wide range of topics, including but not limited to the following:

- Analysis of the impact of GNSS interference on land, airborne, and marine navigation applications;
- Advanced signal processing and spectral estimation methods for GNSS interference detection and mitigation;
- Case studies and new results on GNSS interference detection and mitigation methods;
- Analysis of the impact of GNSS jamming and spoofing on the operation of autonomous platforms;
- Enhancing the safety and reliability of autonomous systems in the presence of interference;
- Multi-sensor fusion with other sensors and systems (e.g., INS, radars, cameras, LiDAR) for mitigating the impact of GNSS interference.
