

## Special Issue

# Advanced Anti-Jamming Methods and Signal Processing Techniques for Radar System

### Message from the Guest Editors

With advancements in electronic systems and signal processing theory, the field of modern radars and electronic jammers has become increasingly competitive. Jamming signals can be modulated in multiple dimensions in a space-time coupled manner for defense and civil applications. Modern radars are developed for performance enhancement within dense electromagnetic jamming environments, implementing new strategies for this purpose, including waveform diversity and/or agility, sophisticated design of signal recovery, knowledge-based adaptive processing, advanced learning-based processing frameworks, and so on. This Special Issue concerns anti-jamming challenges in the radar community. Possible strategies include, but are not limited to: waveform optimization, advanced coding design, frequency/time/coding diversity, and waveform agility, etc. Signal processing methods are of particular interest, including multi-array signal processing, multi-dimensional signal processing, MIMO techniques, frequency diverse array processing, agility radar coherent processing, sparse recovery and compressive sensing, knowledge-aided adaptive processing, and machine-learning-based processing.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
