

Special Issue

Sensors for Occupancy and Indoor Positioning Services

Message from the Guest Editor

COVID-19 is driving demand for new services based on indoor positioning technologies related to location capacity counting and proximity reporting. This kind of data can be analyzed over time for better decision-making and management regarding a facility. People may collaborate by using a particular app on their smartphone or by carrying a custom device, but research must also deal with the issue that people may not collaborate in downloading an app on their smartphones or in using wearables. These challenging services will be useful and much needed by private sites such as industrial facilities and offices as well as public sites such as universities, hospitals, malls, airports or railway stations. Some solutions are based on the smartphone, using Bluetooth Low Energy or Wi-Fi combined with IMU sensors, or based on custom devices such as a bracelet or a wristband using Ultra-Wideband (UWB) or Bluetooth Low Energy. In addition, IoT solutions could potentially allow the deployment of these services. For detailed information, please visit [here](#).

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
