Sensors and Data-Driven Precision Agriculture—Second Edition

Message from the Guest Editors

Now that agricultural machinery has become computerized and data-integrated systems are being realized, the data-driven nature of precision agriculture, which was originally built as part of a mechanized system, has become clear. Measuring crop vigor, which used to be extremely difficult, is gradually becoming possible with the evolution of multiband optical phenotyping, drones, and robots.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.
