Sensor Data Summarization: Theory, Applications, and Systems

Message from the Guest Editor

Research on data summarization techniques is growing rapidly these days, and not only in its original community, theoretical computer sciences and mathematics, but also in more modern fields that use huge amounts of data from sensors, such as machine and deep learning. In recent years, we have also seen more and more papers in applied fields such as robotics, graphics, and computer vision, and new related theories in areas such as differential privacy, cryptographic, compressed sensing, and signal processing. Due to this multidisciplinary research, results sometimes fall between the cracks: Theory-oriented people may not appreciate experimental results, while practitioners may not be interested in or understand tedious mathematical proofs. Often, by the time reviews are available and your journal version is published, the results have already been improved upon and become obsolete. This Special Issue is dedicated to all types of aspects in sensor data summarization. Topics of interest include but are not limited to the following:

- coresets
- sketch
- streaming
- parallel computations
- compressed sensing
- dimension reduction
- sparsification
- sampling

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro
Department of Electrical and Information Engineering, Politecnico di Bari, Via Orabona 4, 70126 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
