

Special Issue

Applications and Methods of Brain-Computer Interface Technology in Health and Wellness

Message from the Guest Editors

With recent advancements in biotechnology, we are seeing a wave of brain-computer interface (BCI) technologies that are capable of non-invasively measuring a range of health and wellness phenomena in humans, and using that information to help support the individual to improve overall health. With these emerging BCI sensor technologies, not only can we measure and investigate the neural mechanisms underlying important health and wellness phenomena (e.g., stress, chronic pain, addiction, traumatic brain injury) in the brain, but we can develop techniques to promote wellness across a broad range of applications. The BCI field has made rapid advancements in recent years, with sensing technologies such as functional near-infrared spectroscopy (fNIRS), electroencephalography (EEG), magnetoencephalography (MEG), and functional magnetic resonance imaging (fMRI), all contributing to sensing and measurement of the human brain. This special issue is focused on empirical studies, methods, and applications of BCI technologies to benefit general health and wellness.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro

Dipartimento di Ingegneria Elettrica e dell'Informazione (Department of Electrical and Information Engineering), Politecnico di Bari, Via Edoardo Orabona n. 4, 70125 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
