

## Special Issue

# New Trends in Networking for Satellite Communications

### Message from the Guest Editors

Recently, we have seen a growing interest in the fundamental theory, key technology, and applications of satellite communication and networks, which are regarded as fundamental for 6G to provide global coverage to a wide range of technological applications requiring high availability and high resilience. In particular, the integration of satellites with future aerial or terrestrial networks has motivated the study of new communication, networking, and computation paradigms and attracted significant interest from both academic and industrial communities. This Special Issue therefore aims to bring together original research and review articles on new trends in the field of satellite communications and networking.

## About the Journal

### Message from the Editor-in-Chief

*Sensors* is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. Sensors organizes Special Issues devoted to specific sensing areas and applications each year.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

#### Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
