

Topical Collection

Convolutional Neural Networks Applications in Sensing and Imaging: Architectures, Insight, Visualization, Transparency

Message from the Collection Editor

Convolutional neural networks (CNNs) have been largely used in computer vision applications in the last few years. New applications in sensing and imaging are targeted in this Special Issue, with a focus on the use of CNN architectures that advance the current state of the art, leading to improved performance in the considered scenarios, while providing transparency in, the visualization of or insight into the decision-making procedure. Using 2D or 3D CNNs, as well as extensions such as global local models, attention mechanisms and the exploitation of features that are the most prominent for the provided decisions are only some indicative topics of interest. Any application field can be considered, involving, for example, classification, prediction, regression, or anomaly detection problems. The topic is part of the “Machine/Deep Learning and Artificial Intelligence in Sensing and Imaging” scope of *Sensors*. It is also related to the following scopes: “Signal Processing, Data Fusion and Deep Learning in Sensor Systems”, “Human–Computer Interaction”, “Localization and Object Tracking” and “Action Recognition”.

About the Journal

Message from the Editor-in-Chief

Sensors is a leading journal devoted to fast publication of the latest achievements of technological developments and scientific research in the huge area of physical, chemical and biochemical sensors, including remote sensing and sensor networks. Both experimental and theoretical papers are published, including all aspects of sensor design, technology, proof of concept and application. *Sensors* organizes Special Issues devoted to specific sensing areas and applications each year.

Editor-in-Chief

Prof. Dr. Vittorio M. N. Passaro
Department of Electrical and Information Engineering, Politecnico di Bari, Via Orabona 4, 70126 Bari, Italy

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Ei Compendex, Inspec, Astrophysics Data System, and other databases.

Journal Rank:

JCR - Q2 (Instruments and Instrumentation) / CiteScore - Q1 (Instrumentation)
